

OTHER: Office 365

While Office 365 does not officially support open source mail clients, this article will provide you with settings that may help you set up your mail client to access Office 365 Exchange.

If your email client supports Exchange Web Services (EWS), use the following settings:

Field	Value
Email Address	naj@instalogic.com
Username	naj@instalogic.com
Domain	Leave Blank
Exchange Server	outlook.office365.com
Server Address	https://outlook.office365.com
EWS Server	https://outlook.office365.com/ews/exchange.asmx
Outlook Web Access	https://outlook.office365.com

If your email client does not support Exchange Web Services (EWS), you will need to configure your client to use traditional POP/IMAP + SMTP. Use the following settings:

User Settings:

Email Address	naj@instalogic.com
Username	naj@instalogic.com

Inbound Servers:

Type	Server Address	Port
POP Server (SSL)	outlook.office365.com	995
IMAP Server (SSL)	outlook.office365.com	993

Outbound Servers:

Type	Server Address	Port
SMTP Server (SSL)	smtp.office365.com	587
